

CONNECT ME TO YOUR EXTERNAL IT SYSTEMS

Integration

A refreshing bonus to my state-of-the-art system is that it can be neatly integrated with your external IT systems. This is fantastic for connecting with both Microsoft Outlook for calendar interaction and Skype for Business for checking the availability status of co-workers.

Status updates are automatic whether you're in a meeting, on a call or out of the office and the seamless nature of IT system integration means that you and your co-workers need only keep one calendar up to date.

Key benefits

- Automatic updates**
 Integrating with Microsoft Outlook allows me to change your call routing to busy if you have a meeting in your Outlook calendar.
- Pull and push presence**
 Skype for Business integration allows me to share and update your presence status. If you're on a call I can tell Skype that you are busy. If you're busy on Skype, Skype can tell me.
- Easy set up**
 Enter your settings once in my state-of-the-art portal to simply and easily enable third-party integration.
- Unifying systems**
 Bring your IT systems together into one seamless, unified platform using my simple integration engine.
